

High Voltage Coils

13,800 Volt Stator Coil

TESTED FOR ENDURANCE

The proof is in the testing. We compared our coil with two of our competitors' coils during voltage endurance testing. The Southern Electric coil passed all of the tests: 30 kv for 400 hours, Dissipation Factor Testing in steps 2 kv through 8 kv , Tip Up 0.09 and lastly High Voltage Breakdown 90 kv. We are producing 13,800 for several OEM's with great success. We offer machine turn-taping and machine ground wall taping to maintain the consistency needed for high voltage coils. Call our Engineering group for further detail.
